

# Rosemary

*Rosmarinus officinalis*

## General Information

- Edible herb
- Sun Exposure: Full sun
- Water needs: Moderate
- Cold Tolerance: Cannot tolerate lower than 20 degrees Fahrenheit
- Days to harvest: 80 to 100 days from planting
- Harvest season: Spring/Summer

## Planting Guide

- Try to start new rosemary seeds from cuttings from established plants
- Time: Plant 8 to 10 weeks after the last frost
- Location: Site with full sun and well drained soil, with soil temperature around 70 degrees Fahrenheit.
- Spacing: Space each plant at least three feet apart from each other.
- Mulching: No mulch or fertilizer needed as it can bring disease to the plant.

## Care Guide

- Irrigation: Water once every 1 to 2 weeks, but remember to let the plant dry out thoroughly before watering again.
- Pruning: Can prune anytime from during spring or summer or up until four or six weeks before the first frost. There is an option to remove 5 cm maximum off of the branches if you want to create a bushier plant.
